In accordance with AS 43.77.020(e)(3), we hereby elect to calculate our 2014 quarterly fishery resource landing tax payments based on actual landings in each quarter. For the tax year 2014, quarterly payments were calculated as follows:

- 1) Number of pounds of unprocessed resources harvested and processed in federal waters and first landed in Alaska in the quarter;
- 2) Multiplied by the statewide average price for each respective species published in the previous year by the department;
- 3) Multiplied by the applicable tax rate (1% for "developing" species and 3% for "established" species);
- 4) Multiplied by 90% (.9).

In making this election, we understand that we are required to use this calculation method for all quarters in 2014. We also understand that this election is only effective for the tax year 2014, and we must make a separate election to use this method in the subsequent tax year. Because our computations are subject to audit, we understand we may be asked to provide documentation to support our quarterly payment calculations.
